

Electrical Contact Gauges

for measuring the water level in wells, also under noisy conditions. Touches the plummet the water level, a light beams at the winding device. Only the water can switch the light on.

Cable:	flat plastic cable with 2 steel wires, cm-graduation in black, dm figures in black, meter figures in red colour
Plummet:	refined steel with electrode and insulation, diameter 15 mm
Electric:	4 batteries 1,5 Volt each, 1 bulb 6 volt, 1 transistored circuit
Winder:	20 and 30 m in plastic winding drum from 50 m up in strong winder

Contact gauges upto 200 m in strong metal case
300 + 500 m in wooden case

Remark:

Instead of the lamp, the device can be supplied with a buzzer or additional to the bulb a buzzer can be built in. The buzzer sounds when the plummet touches the water level (at additional costs).
